CSE205: DATA STRUCTURES AND ALGORITHMS

L: 3 T: 0 P: 2 Credits: 4

Course Outcomes: Through this course students should be able to

CO1:: design, implement and study various data structure algorithms.

CO2:: understand the importance of data structures in context of writing efficient programs.

CO3:: develop skills to apply appropriate data structures in problem solving.

CO4:: formulate new solutions for programming problems or improve existing code using learned

algorithms and data structures.

Unit I Introduction: Basic Data Structures, Basic Concepts and Notations, Complexity analysis: time space

and trade off, Omega Notation, Theta Notation, Big O notation

Arrays: Linear arrays: memory representation, Traversal, Insertion, Deletion, Searching, Merging

and their complexity analysis.

Sorting and Searching: Bubble sort, Insertion sort, Selection sort

Unit II Linked Lists: Introduction, Memory representation, Allocation, Traversal, Insertion, Deletion, Header

linked lists: Grounded and Circular, Two-way lists: operations on two way linked lists

Unit III Stacks: Introduction: List and Array representations, Operations on stack (traversal, push and pop),

Arithmetic expressions: polich potation, evaluation, and transformation of expressions. Evaluation and

Arithmetic expressions: polish notation, evaluation and transformation of expressions. Evaluation and transformation of expressions, Function call

Queue: Array and list representation, operations (traversal, insertion and deletion), Priority Queues,

Unit IV Recursion: Introduction, Recursive implementation of Towers of Hanoi, Merge sort, Quick sort

Trees: Binary trees - introduction (complete and extended binary trees), memory representation (linked, sequential), Pre-order traversal, In-order traversal, Post-order traversal using recursion,

Binary Search Tree- searching, insertion, deletion

Unit V AVL trees and Heaps: AVL trees - introduction, AVL trees Insertion, AVL trees Deletion, Heaps -

Insertion, Heapify, Deletion, Heap Sort, Huffman algorithm

Unit VI Graphs: Warshall's algorithm, Shortest path algorithm Floyd Warshall Algorithm (modified Warshall

algorithm), Graph Traversal: BFS, DFS

Hashing: Hashing Introduction, Hash Functions, Hash Table, Closed hashing (open addressing),

Linear Probing, Quadratic Probing, Double Hashing, Open hashing (separate chaining)

List of Practical:

Arrays: Program to implement insertion and deletion operations in arrays

Searching: Program to implement different searching techniques - linear and binary search

Sorting: Program to implement different sorting techniques – bubble, selection and insertion sort

Linked List: Program to implement searching, insertion and deletion operations in linked list

Doubly Linked List: Program to implement searching, insertion and deletion operations in doubly

linked list

Stacks: Program to implement push and pop operations in stacks using both arrays and linked list

Queues: Program to implement enqueue and dequeue operations in queues using both arrays and linked list

iiiikca iist

Recursions: Program to demonstrate concept of recursions with problem of tower of Hanoi

Recursive Sorting: Program to implement recursive sorting techniques - merge sort, quick sort

Session 2020-2021 Page: 1/2

Trees: Program to create and traverse a binary tree recursively

Binary Search Tree: Program to implement insertion and deletion operations in BST

Heaps: Program to implement insertion and deletion operations in Heaps and Heap Sort

Text Books: 1. DATA STRUCTURES by SEYMOUR LIPSCHUTZ, MCGRAW HILL EDUCATION
